

# HOW DO I KNOW IF A TROVERA™ LIQUID BIOPSY TEST IS RIGHT FOR ME?

Your urine is the key to noninvasive cancer treatment monitoring

As cancer cells grow, they release circulating tumor DNA (ctDNA) into the urine and blood. The Trovera liquid biopsy test utilizes urine (and blood) to provide you and your physician with a continuous stream of information about changes in your cancer.

## IDENTIFY

Trovera identifies the presence or absence of a genetic mutation

## INFORM

Trovera provides you and your physician with information that can aid in decision making regarding treatment and management of your cancer

## MONITOR

Trovera monitors changes in your cancer, including if your cancer is responding to treatment, or if your cancer is progressing

**When it comes to monitoring your cancer, Trovogene understands the importance of providing you and your physician with:**

- An easy, noninvasive option for monitoring your cancer as it changes over time
- Important information to inform treatment decisions, while reducing the need for repeat tissue biopsies

Trovera tests are a reliable, accurate, and convenient option for you and your physician to monitor changes in your cancer over time. Please see the next page for questions to discuss with your physician to determine if Trovera may help you.

# QUESTIONS TO ASK YOUR PHYSICIAN ABOUT TROVERA

- ▶ Have you ordered molecular profiling of my cancer? What information did you learn from this test? Can a Trovera test help identify the mutation(s)?
- ▶ Am I now on or would it be helpful for us to discuss targeted treatment for this particular mutation?
- ▶ How do we know whether the treatment I am on is working or if my cancer is progressing? Can a Trovera test provide these answers?
- ▶ Can we use a Trovera test so that I don't have to go through a repeat tissue biopsy?
- ▶ Could a Trovera test provide information about how my cancer is doing between scheduled exams?
- ▶ Include additional questions you may want to ask your physician below:
